

Managed IT services Provider Improves Bank Operations

Business Profile

Tower Community Bank is the only locally owned, locally managed bank in Sequatchie Valley (Tenn.) area. That hometown commitment is central to the bank's mission: "Tower Community Bank provides financial solutions, creating partnerships with our customers that make our communities better places to live, work, and raise a family."

The Challenge

Lecia Post, Tower Community Bank's tech-savvy SVP, administered the organization's IT for several years of growth. As infrastructure requirements multiplied, she ceded control of proactive support and network monitoring several years ago to NetGain's managed IT services team and worked with the MSP on the bank's strategic planning. As the bank continued to expand and audit compliance requirements became more demanding, "We were not able to meet our employees' expectations," said Post. Tower Community Bank recently explored options for a more robust IT services solution.

The Solution

The Tower Community Bank leadership team examined several potential IT support and strategy choices. Because of the existing close working relationship with NetGain, the bank's leadership already was familiar with NetGain's established expertise. The bank team also appreciated the longevity of NetGain's employee tenure. They opted to upgrade the bank's commitment to IT by joining Technology OneSource, the MSP's industry-leading managed services program.

During the bank's time as a Technology OneSource member, employees have commented that they benefit from having access to NetGain's 24/7 help desk, and the executive team has lauded the MSP for the strength of its reactive support services and quarterly business reviews.

"This has freed up my time to concentrate on improving our systems, rather than just maintaining the status quo."

Lecia Post,
SVP,
Tower Community Bank
